

Statements of Individual Contributions

Xiaoxiao CHEN, Dong FEI, Honglin Li, and Yuxiang WANG

October 22, 2016

Abstract

This document details the individual contributions of each group member to the outcome of the group project, benchmarking $(\mu/\mu, \lambda) - ES$ with Search Path with the COCO platform. It also includes an anti-plagiarism phrase that needs to be signed by every group member.

1 Individual Contributions to the Group

We had several meetings at the beginning of the project, everyone studied and understood the paper together. After that we established a github project to cooperate on different parts of work including prototype design, coding, debug, test, performance measurement, report edition, etc.

1.1 Xiaoxiao CHEN

I ameliorated the source code and implemented the algorithm on coco platform. I debugged the program through all the project.

1.2 Dong FEI

I worked on the generated data analysis and debugged critical parameters on the coco platform.

I wrote most part of the report and participated in debugging through all the project.

1.3 Honglin LI

I did the unit test, time experiment and part of result analysis. I participated in debugging through all the project.

1.4 Yuxiang WANG

I wrote the first version of the algorithm with python and debugged the program through all the project.

I participated in adjusting the critical parameters.

2 Anti-Plagiarism Statement

All group work, be it the source code, the documentation, the report, the presentation, or any other contribution have been solely written by the group members or corresponding reused parts have been cited accordingly. We, the group members, confirm herewith as well that we all have read and understood the “What is plagiarism” page of <http://www.plagiarism.org/plagiarism-101/what-is-plagiarism/>.
